The “CollabXT for TFS” project has been created to offer a generic way for transforming a V-Modell® XT Process into a valid Team Foundation Server Process Template. Therefore the project offers a generator to automate this step and a few tools to enable additional TFS features like Work Item Linking. In additional releases we will offer the possibility to enrich the high level V-Modell® XT Process with other more detailed micro process elements. This will really add value to the V-Modell® XT and will enable to implement best practice methodology into V-Modell® XT process model.

The V-Modell is a process model for planning and executing Projects. The V-Modell improves project transparency, project management and the probability of success by defining concrete practices with associated results and responsible Roles. The V-Modell® XT is a further development of the V-Modell 97. The V-Modell® XT is an important process model in Germany as it is the obligatory process to be used for projects that are assigned through German government.

- Support for:
 - Integrated Application Lifecycle Management
 - Collaboration in distributed development projects
 - Automated process support and operation
 - Sophisticated user-assistance

CollabXT Project and Goals

- Integration extends the standard tool chain...
 - Editor und Project Assistant → Authoring and Tailoring the V-Modell
 - Generator creates a Team System Process Template from given content
 - Process Template can also be edited using Team System-integrated tools...

CollabXT for TFS transparently extends the standard tool-chain of the V-Modell® XT

- Features:
 - Using every tailored *Supplier* and *Acquirer/Supplier* V-Modell® XT 1.2.1 as basis
 - Metamodel-based process for deriving generators and process-extendors, including
 - Product Library, Process Documentations
 - Sophisticated Work Item Tracking and Reporting
 - Development support by IDE-integrated Editors, Source Control System, Compilers, fine grained development methodology
 - Support for German and English V-Modell® XT derivatives
 - Extending the V-Modell® XT standard tool-chain for Microsoft Visual Studio Team Foundation Server

- CollabXT for TFS is designed for a *minimal-impact* use, meaning
 - No special prerequisites are required
 - Only standard V-Modell-tools are needed
 - Team Foundation Server installed on a server available via network
- The CollabXT for TFS Generators require
 - .NET runtime environment
(<http://www.microsoft.com/downloads/details.aspx?familyid=10CC340B-F857-4A14-83F5-25634C3BF043&displaylang=de>)
- The V-Modell® XT tools require
 - Java runtime
(<http://java.sun.com/javase/downloads/index.jsp>)
 - Tools from the V-Modell Web Portal
(<http://www.v-modell-xt.de>)

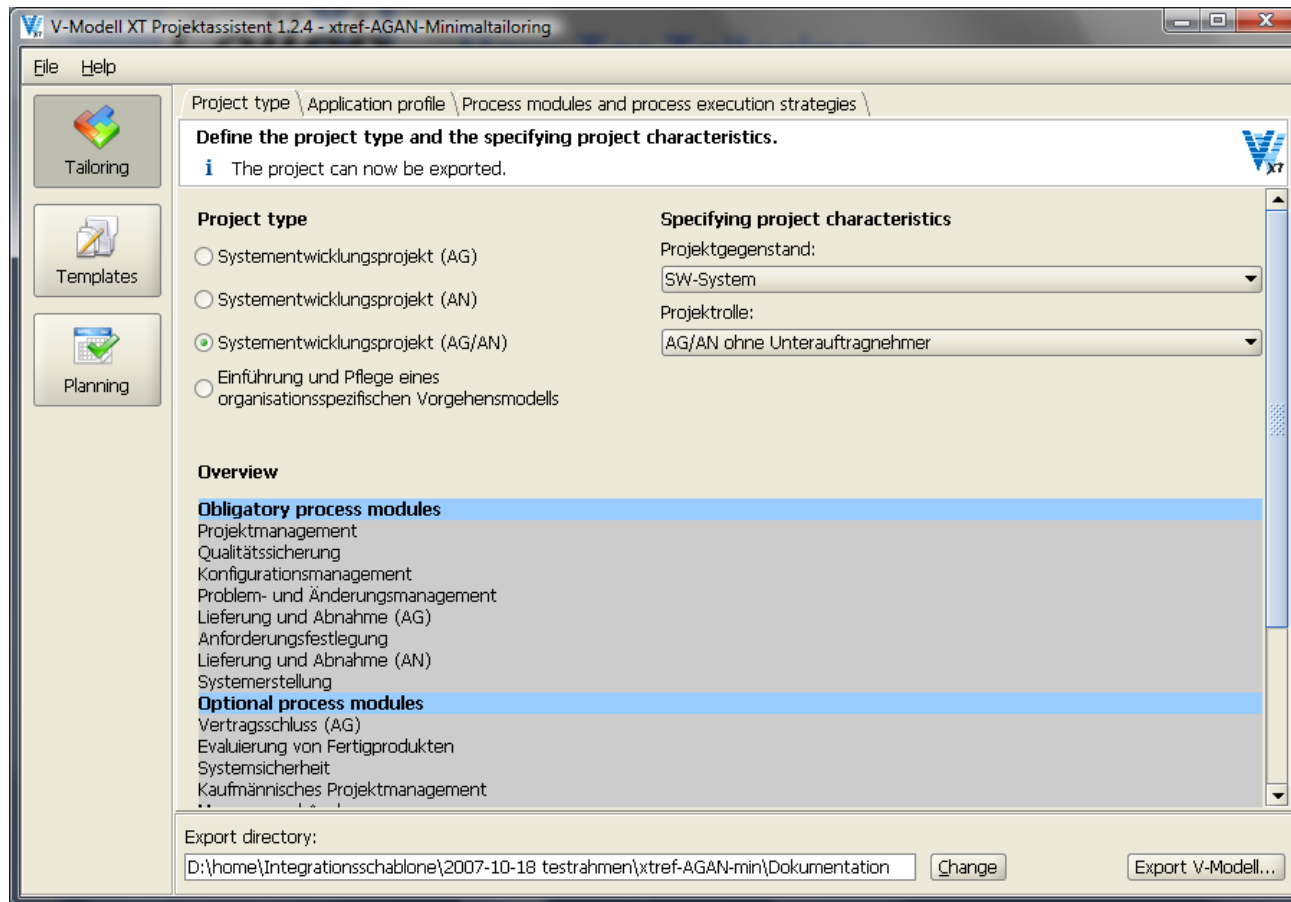

The following slides show how to use CollabXT for TFS

1. Download and install the V-Modell tools
2. Download and install the CollabXT for TFS Generator
3. Tailor* the V-Modell® XT using the V-Modell tools**
4. Use CollabXT for TFS Generator to generate the TFS-Template
5. Use the CollabXT-TFS Linker to link the initially generated Work Items

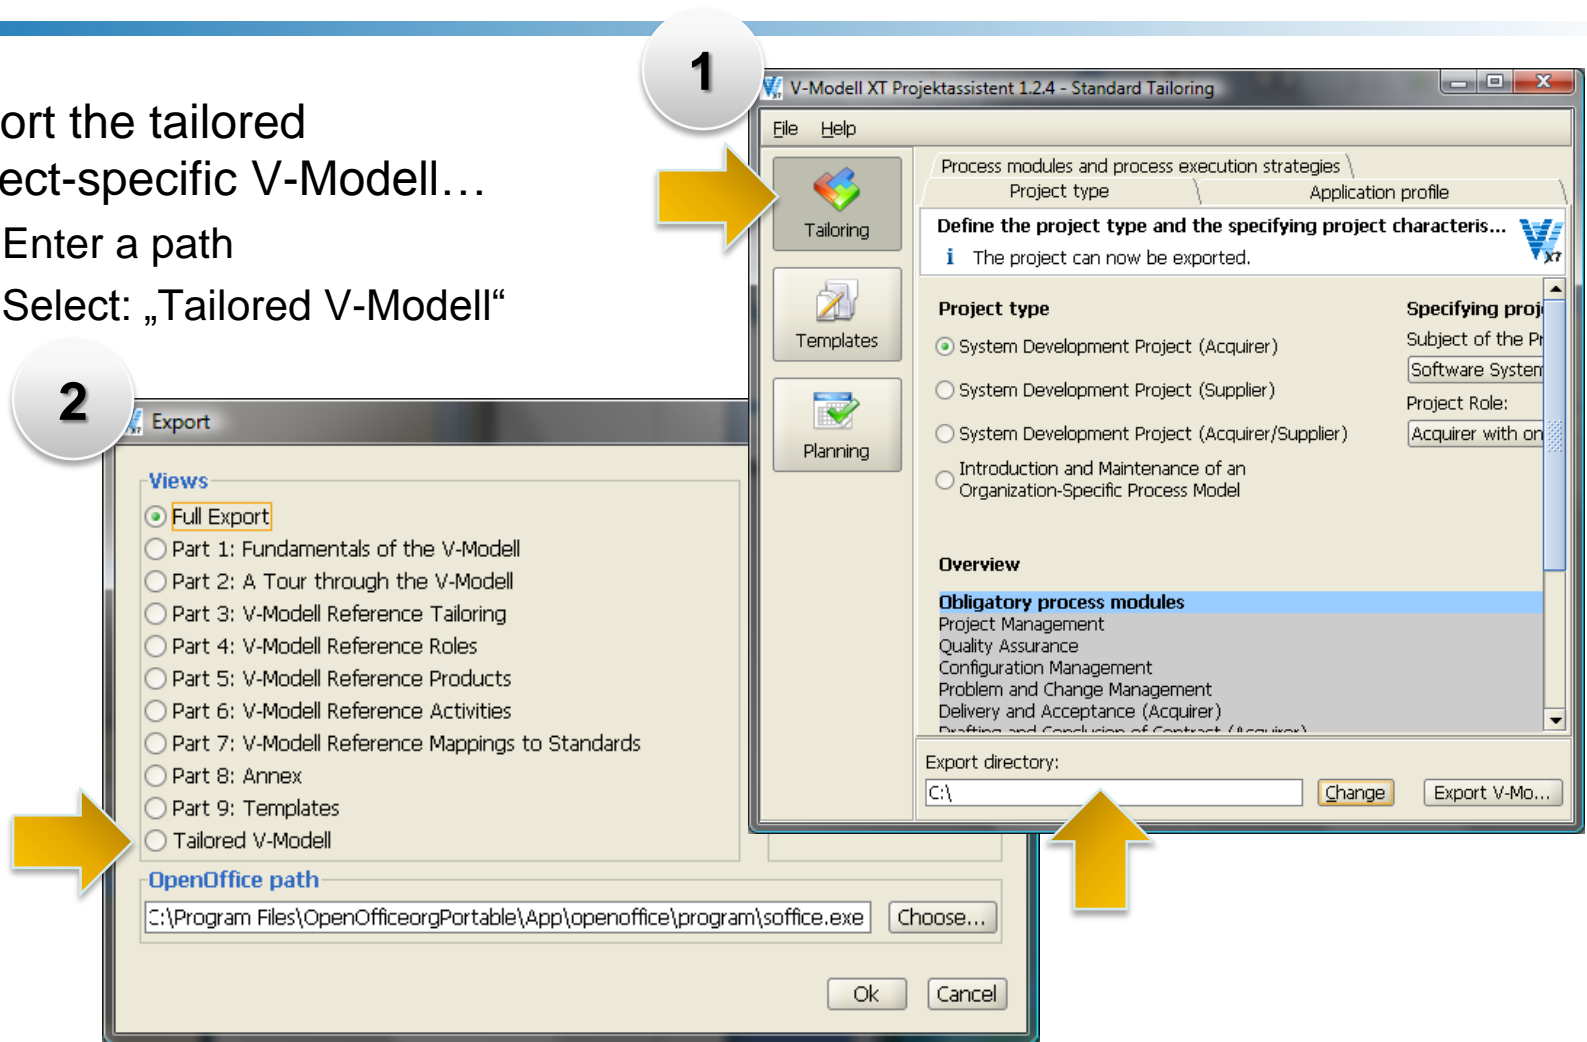

* You also have the chance to edit the V-Modell® XT according to your special needs. CollabXT for TFS supports many changes of the base model as long as Supplier and Acquire project types are available.

** We assume that tailoring of the V-Modell® XT is known to you. Otherwise download the whole installation package of the V-Modell® XT and use first steps and FAQ of the documentation.

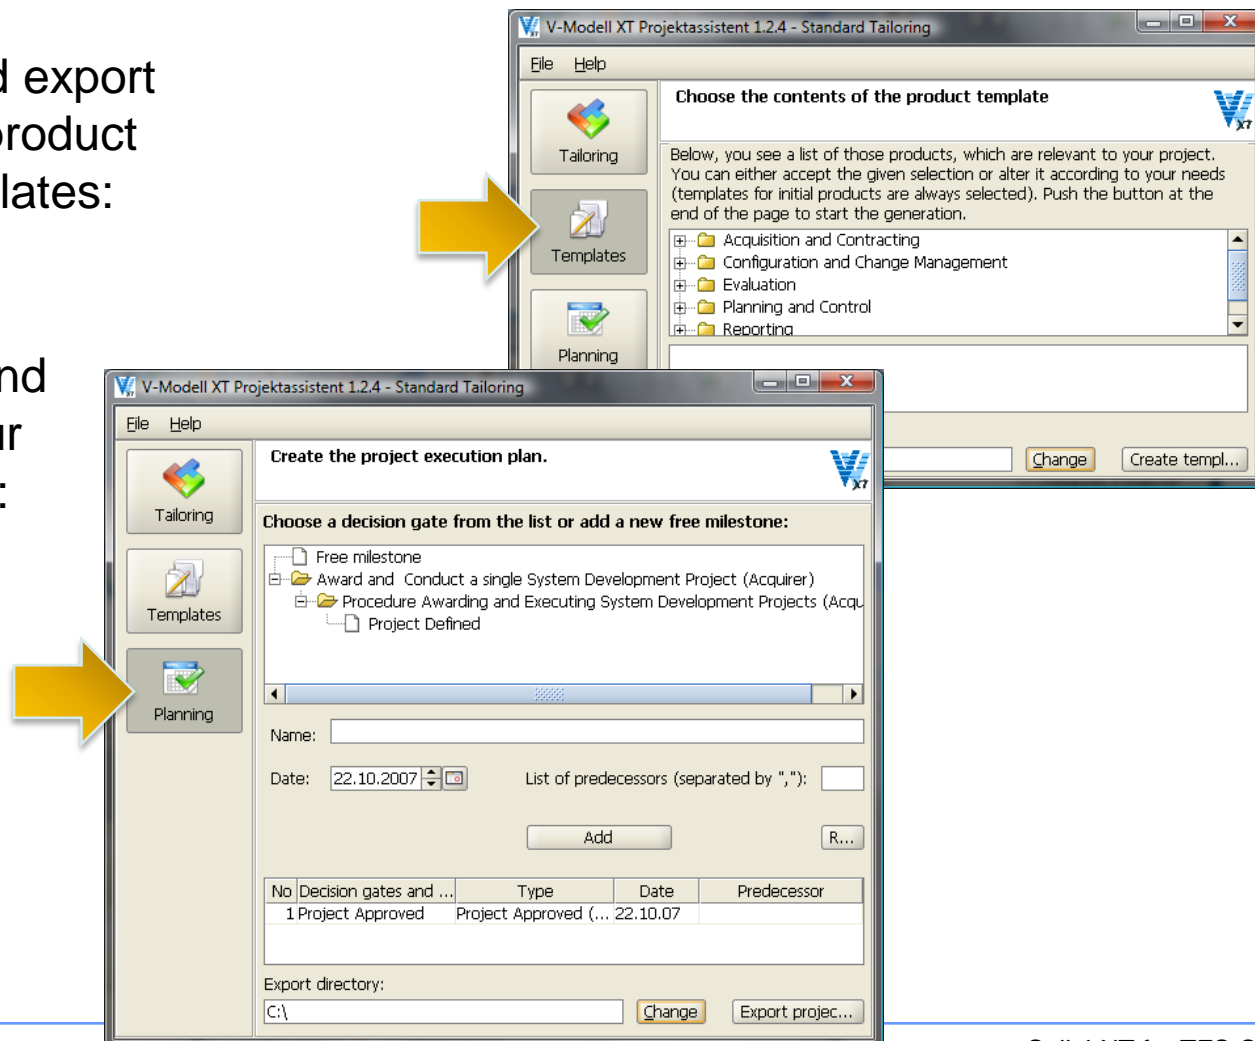

- Tailor V-Modell®XT using Project Assistant

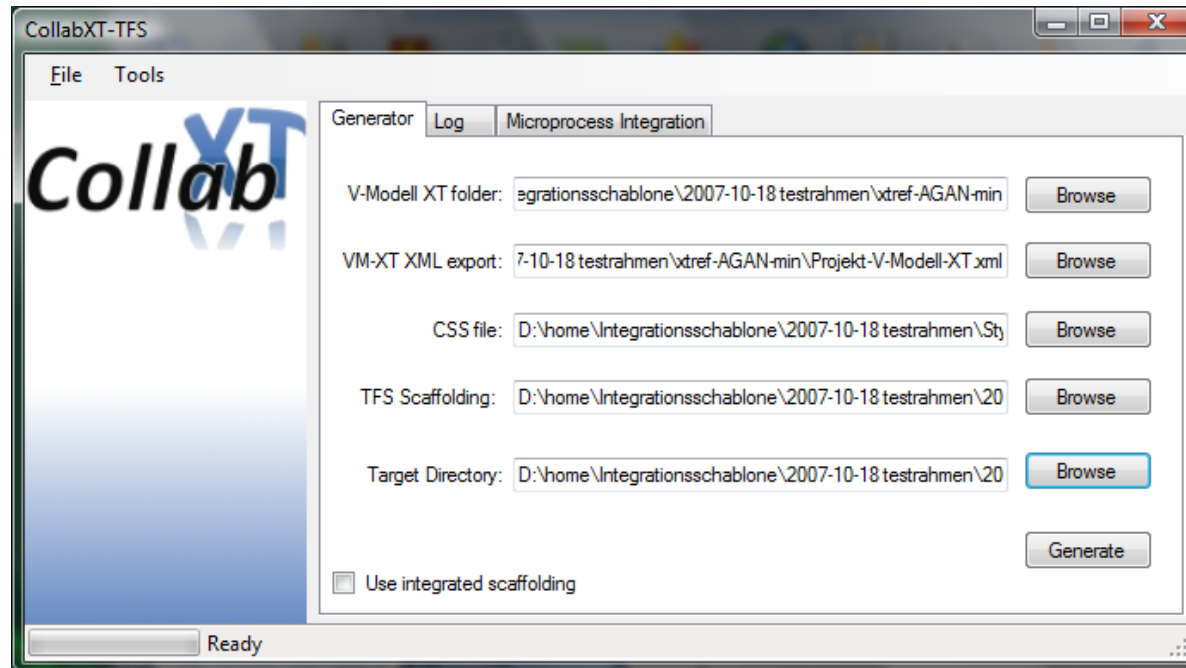

- Export the tailored project-specific V-Modell...
 - Enter a path
 - Select: „Tailored V-Modell“

- Select and export the work product RTF-templates:
- Prepare and export your initial plan:

- Locate all contents for the generator
 - V-Modell exports
 - CSS-File (optional)
 - Meta Template

- Relevant contents' description

The optional **CSS-File** contains and adopted style sheet for a more screen-oriented layout of the generated V-Modell XT documentation. The style is optional and can also be changed according to corporate identity questions.

The **TFS-Meta Template** contains all relevant structures of a valid TFS template. The template is copied and filled with content from the V-Modell

The **V-Modell XT export folder** contains all relevant exported contents.

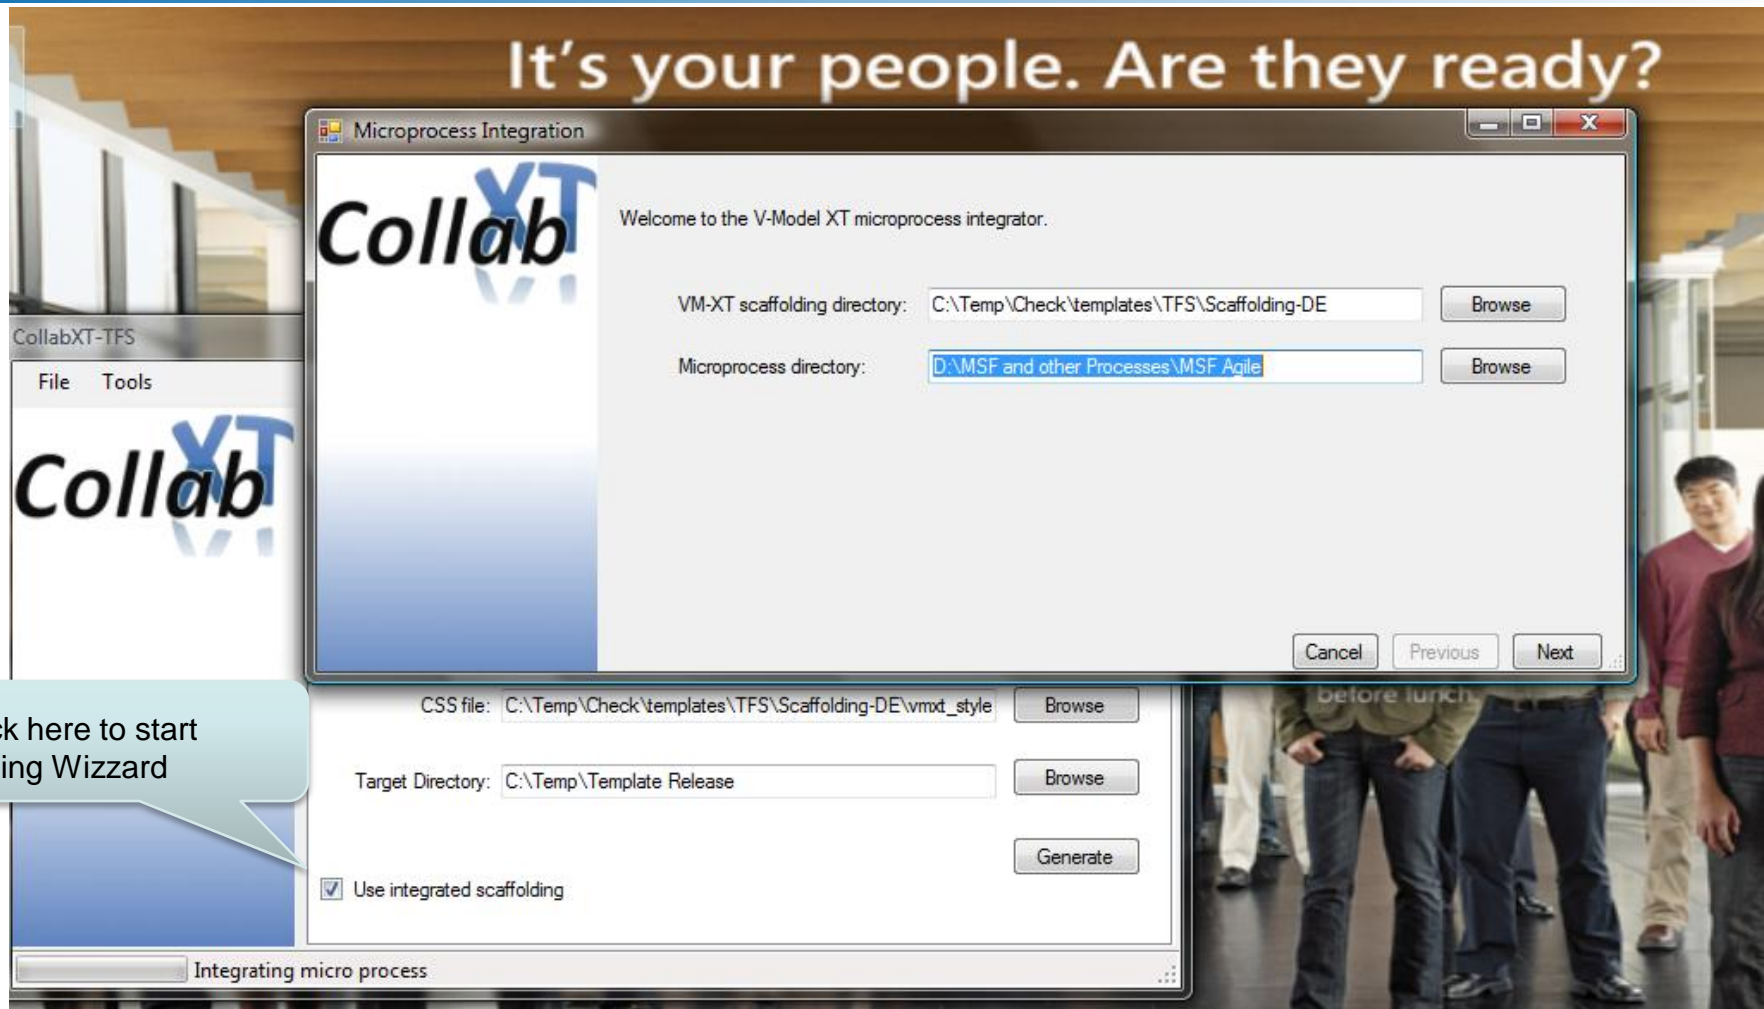

Structure of the <folder>:

- folder\Dokumentation
- folder\Produktbibliothek
- folder\Projekt-V-Modell-XT.xml

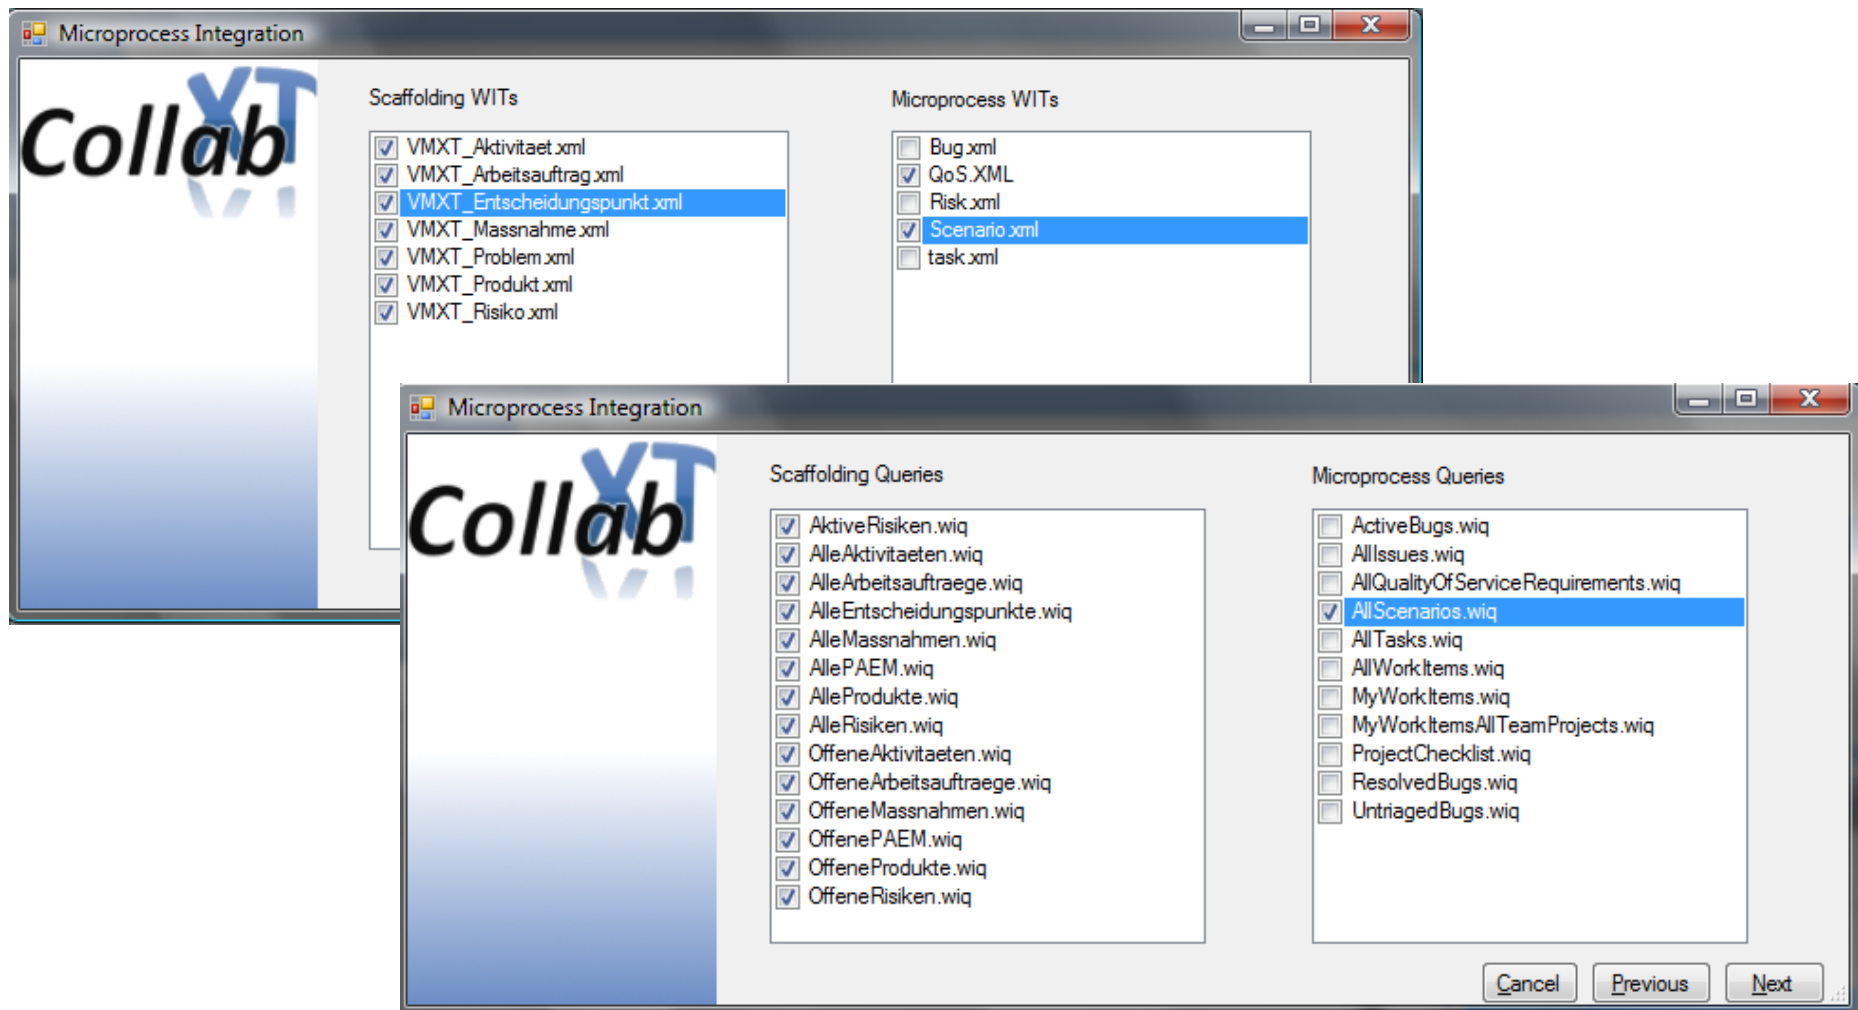

The screenshot shows the 'Generator' window with the 'Log' and 'Microprocess Integration' tabs. The 'V-Modell XT folder' field is set to 'egrationsschablone\2007-10-18 testrahmen\xtref-AGAN-min'. The 'XT XML export' field is set to '7-10-18 testrahmen\xtref-AGAN-min\Projekt-V-Modell-XT.xml'. The 'CSS file' field is set to 'D:\home\Integrationsschablone\2007-10-18 testrahmen\Sty'. The 'TFS Scaffolding' field is set to 'D:\home\Integrationsschablone\2007-10-18 testrahmen\20'. The 'Target Directory' field is set to 'D:\home\Integrationsschablone\2007-10-18 testrahmen\20'. There are 'Browse' buttons next to each field and a 'Generate' button at the bottom right. A checkbox for 'Use integrated scaffolding' is at the bottom left.

- Merging a Microprocess enables you to detail the process usage
This is a great and easy way to integrate 2 processes
- For Merging you need a Team System Process Template that represents the Microprocess
 - You may use MSF Agile, MSF CMMI
 - You may use your own Best Practice Process
 - You may use any other valid Team System Process Template
- Merging allows you to combine the following process elements
 - Work Item Types
 - Queries*
 - Document Libraries
 - Reports
- * Be sure to only merge queries to which corresponding Work Item Types are chosen for merge as well otherwise the instantiation will crash

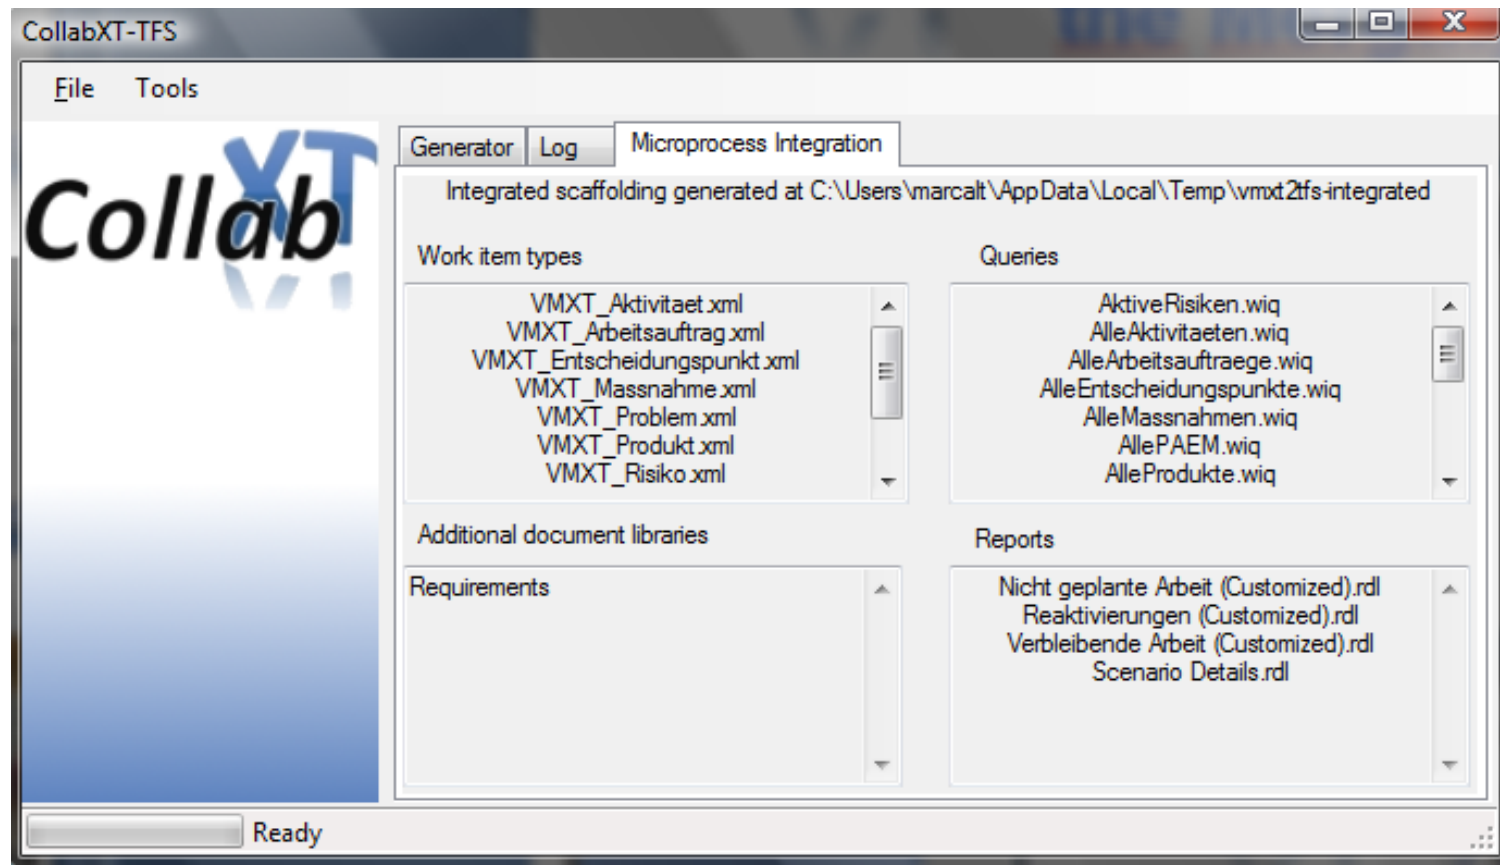

Merging the Microprocess

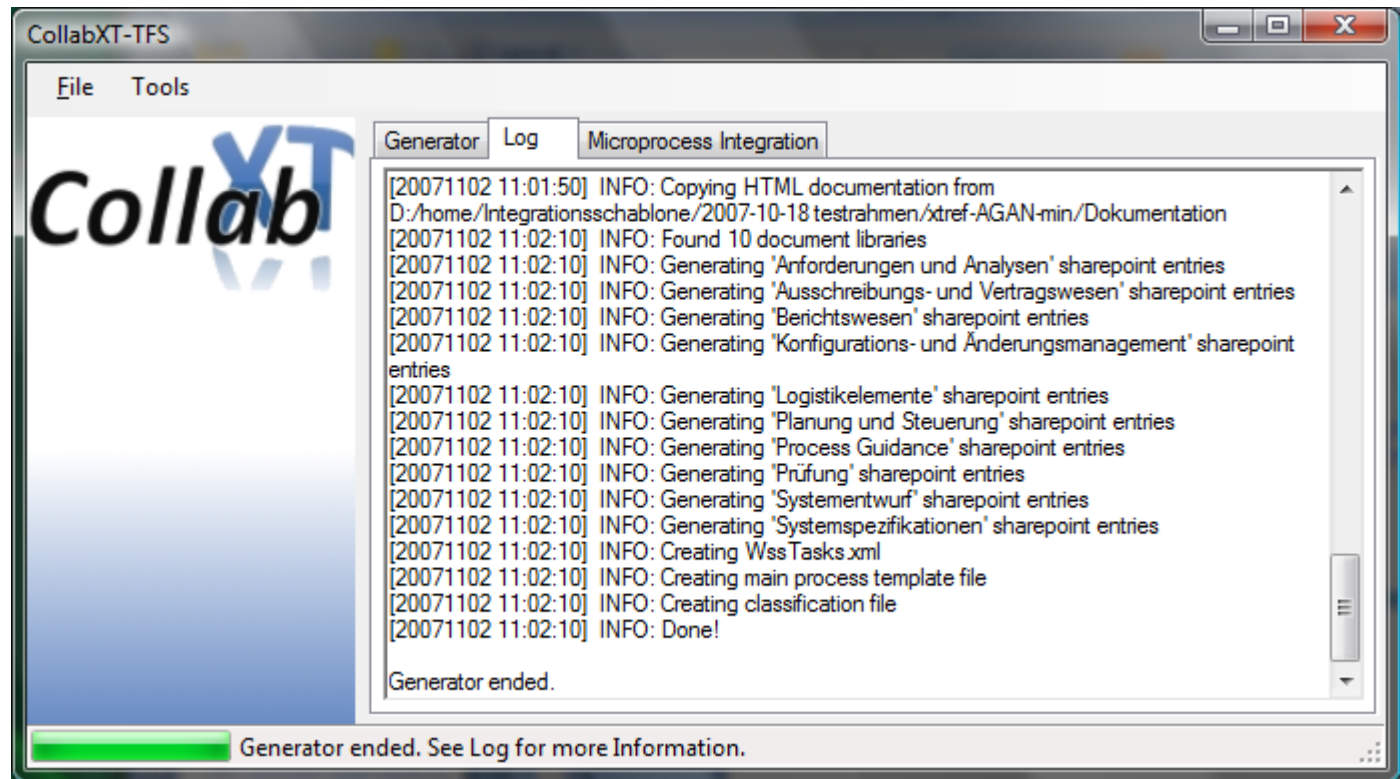

Merging the Microprocess the Merging Wizzard

Merging the Microprocess

- All relevant information is collected in a log → take a deeper look if something went wrong...

The following slides show how to use CollabXT for TFS

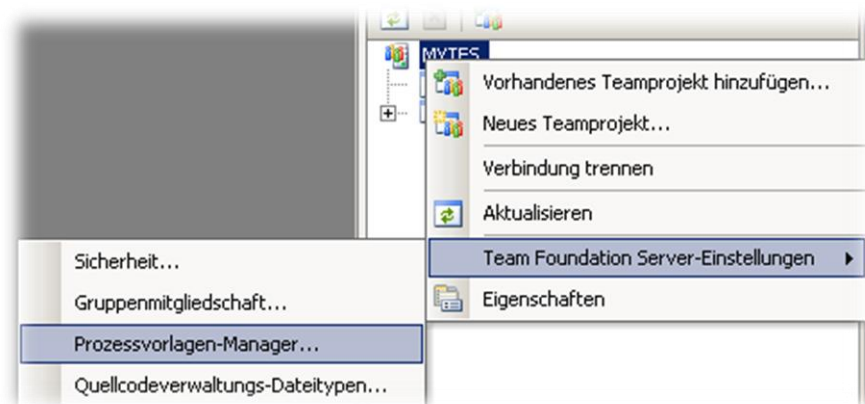

1. Download and install the V-Modell tools
2. Download and install the CollabXT for TFS Generator
3. Tailor* the V-Modell® XT using the V-Modell tools**
4. Use CollabXT for TFS Generator to generate the TFS-Template
5. Use the CollabXT-TFS Linker to link the initially generated Work Items

* You also have the chance to edit the V-Modell® XT according to your special needs. CollabXT for TFS supports many changes of the base model as long as Supplier and Acquire project types are available.

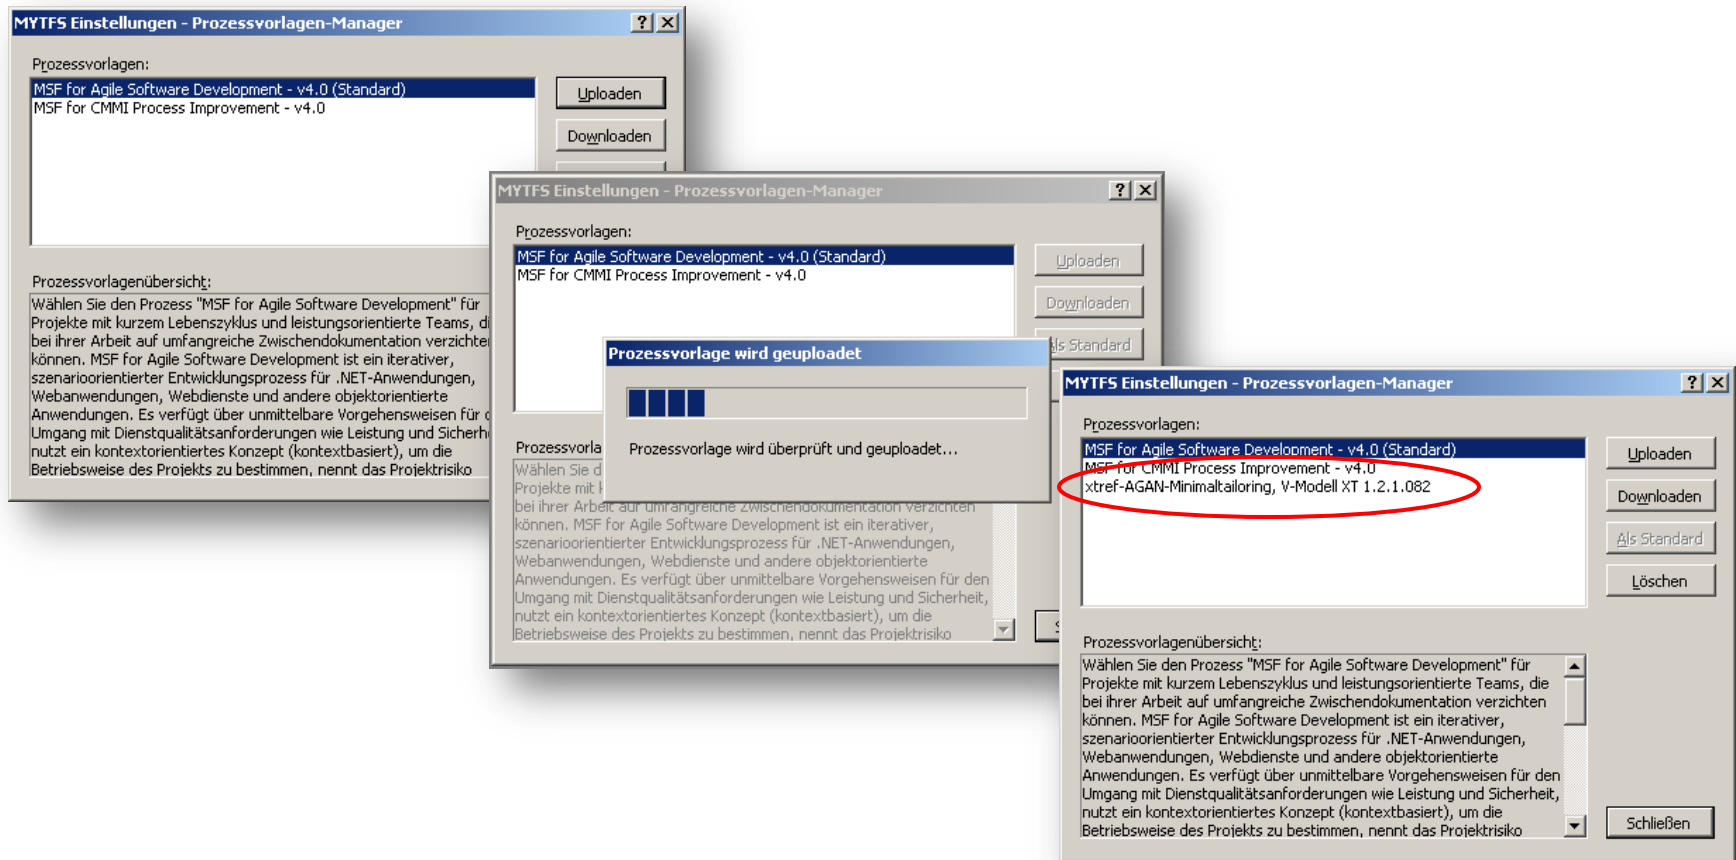

** We assume that tailoring of the V-Modell® XT is known to you. Otherwise download the whole installation package of the V-Modell® XT and use first steps and FAQ of the documentation.

- Install the updated SharePoint Template on the TFS, using the script:
[*upload_**](#)
 (for English systems: [upload_sps_template_English_w2k3Server.bat](#))

- The template has to be imported to the TFS Process Template Manager this requires:
 - An installed, clean TFS
 - An installed SharePoint Template

- Upload the template

1 Teamprojekteinstellungen angeben

Der Assistent für neue Teamprojekte verwendet den hier eingegebenen Teamprojektnamen beim Erstellen verschiedener Komponenten in Visual Studio Team System. Nachdem das Teamprojekt erstellt wurde, dient der Name den Teammitgliedern zum Suchen des Teamprojekts in Team System. Der gewählte Name muss daher eindeutig sein und darf nicht bereits von folgenden Diensten verwendet werden:

- Team Foundation Server
- Windows SharePoint Services
- SQL Server Reporting Services

Wie lautet der Name des Teamprojekts?

V-Model XT for TFS Test Project

2 Prozessvorlage auswählen

In der Prozessvorlage sind wichtige Aspekte der Verwaltung eines Teamprojekts definiert. Sie kann Arbeitsaufgabentypen, Arbeitsprodukte, Berichte, Abfragen und Prozessketten für das Teamprojekt umfassen.

Zum Erstellen des Teamprojekts verwendete Prozessvorlage:

stref-AGAN-Minimalanforderung, V-Model XT 1.2.1.002

Ausführliche Beschreibung der Prozessvorlage:

Das V-Model ist ein Vorgehensmodell zum Planen und Durchführen von Projekten. Durch die Vorgabe konkreter, standardisierter Vorgehensweisen, zugehöriger Ergebnisse und verantwortlicher Rollen erhöht das V-Model die Projekttransparenz, verbessert das Management von Projekten und erhöht nachhaltig die Erfolgswahrscheinlichkeit. Das hier beschriebene V-Model XT ist eine Weiterentwicklung des 1997 veröffentlichten V-Model 97. Das "V-Model XT" wird in folgenden Text kurz als "V-Model" bezeichnet.

3 Einstellungen für das Projektportal angeben

Der Assistent verwendet den hier eingegebenen Namen und die Beschreibung beim Erstellen des Teamprojektportals in Windows SharePoint Services. Als Standardtitel wird der für das Teamprojekt eingegebene Name verwendet. Sie können jedoch einen anderen Titel eingeben, der nur für das Teamprojektportal verwendet wird.

Titel des Teamprojektportals:

V-Model XT for TFS Test Project

Beschreibung des Teamprojektportals:

This is the test project, created for demo...

Adresse der Teamprojekt-Portalsite:

http://MYTFS/sites/V-Model XT for TFS Test Project

4 Einstellungen für Quellcodeverwaltung festlegen

☐ Leeren Quellcodeverwaltungsordner erstellen
[keine]

☐ Neue Quellcodeverwaltungsverzweigung erstellen

Verzweigen von:

MSF Agile

☒ Jetzt keinen Quellcodeverwaltungsordner erstellen

5 Teamprojekteinstellungen bestätigen

Teamprojekteinstellungen:

Teamprojekteinstellungen

- Name: V-Model XT for TFS Test Project

Prozessvorlageinstellungen

- Prozessvorlage: stref-AGAN-Minimalanforderung, V-Model XT 1.2.1.002
- Vorgabenbeschreibung: Das V-Model ist ein Vorgehensmodell zum Planen und Durchführen von Projekten. Durch die Vorgabe konkreter, standardisierter Vorgehensweisen, zugehöriger Ergebnisse und verantwortlicher Rollen erhöht das V-Model die Projekttransparenz, verbessert das Management von Projekten und erhöht nachhaltig die Erfolgswahrscheinlichkeit. Das hier beschriebene V-Model XT ist eine Weiterentwicklung des 1997 veröffentlichten V-Model 97. Das "V-Model XT" wird in folgenden Text kurz als "V-Model" bezeichnet.

Teamsiteinstellungen

- Titel: V-Model XT for TFS Test Project
- Beschreibung: This is the test project, created for demo... Dieses Teamprojekt wurde auf Basis

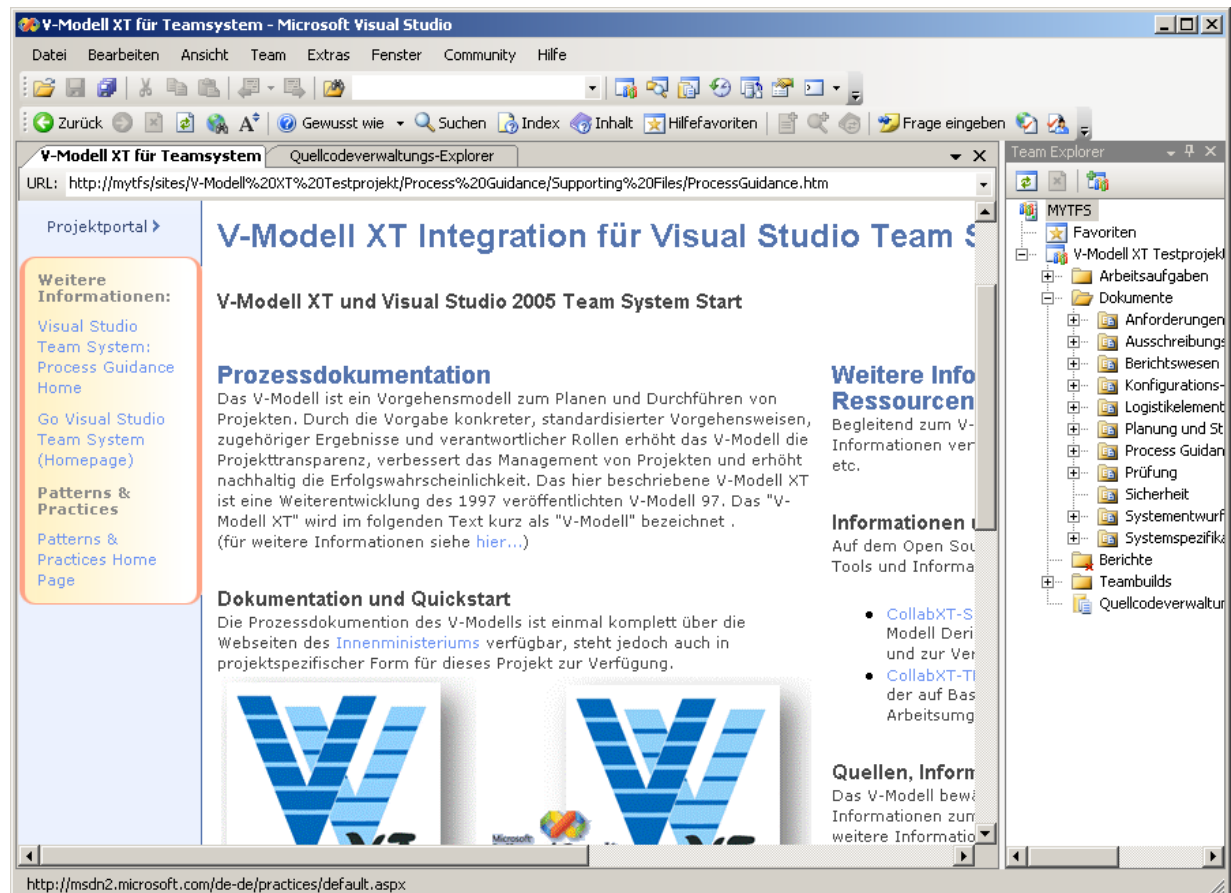

Klicken Sie auf "Fertig stellen", um das Teamprojekt zu erstellen, oder klicken Sie auf "Zurück", um die Einstellungen zu ändern.

6 Teamprojekt-Erstellungstatus

Status: Work items uploaded

Das neue Teamprojekt wird nun erstellt. Dieser Vorgang kann einige Minuten dauern.

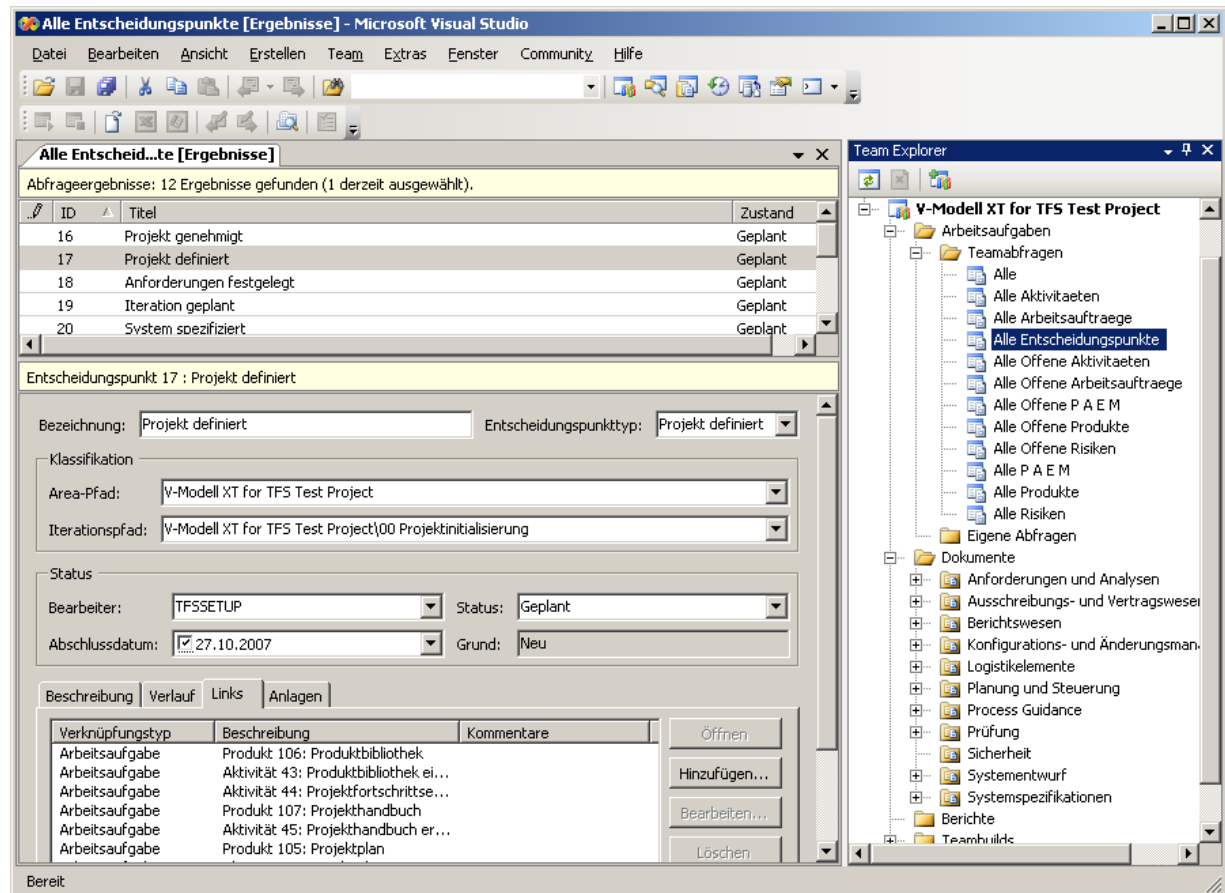

- The opening screen of the Team Explorer including related information and additional material and sources...

- Work Items generated from V-Modell XT contain linkage information
 - To represent process instance structure and element connection
 - Linkage is consistent o the initial, tailored V-Modell
- After instantiating a V-Modell-based process template, linkage can also be instantiated on the server:
 - Select server and the project to be linked

- After instantiating and linking – the V-Modell-based development project is ready to use...

- First release is available since 11-15-2007 at

www.codeplex.com/VModellXTTFS
- Features:
 - V-Modell® XT support for Supplier and Acquirer/Supplier project types
 - Actual support for German derivatives
 - Supports customized V-Modell® XT variants
 - Fully integrated in TFS-environment incl. linking of instantiated Default Work Items
- Open:
 - Multi-language support for German and English variants
 - Improvement of reporting
 - Improvement of SharePoint-Intergration

Collab
